

GAIM is a virtual reality hunting and sport shooting simulator. Practice and develop your skills with a rifle, Ar15, shotgun or handgun wherever you are. With true ballistics and animal anatomy it will help you build muscle memory and get Ready for Reality!

When you combine the realistic GAIM firearm controllers with our software in Meta Quests virtual reality, you end up with a true to life shooting experience. GAIM is an easy to use product, suitable for both homes, shooting ranges, hunting lodges and organizations.

The GAIM Simulator

GAIM is a virtual reality hunting and sport shooting simulator. GAIM is fully immersive, you can look and shoot in any direction and your movement in real life is the same as in virtual reality. You have to take distance and speed of the target into account when calculating the lead. The GAIM wooden rifle and Ar15 Delta training handgun are both made as close to real firearms as possible.

Every shot in GAIM can be analyzed showing barrel tracking, where you aimed and where the shot hit the target and more. Visibly showing how you release shots and what you can improve on.

Hardware

As a customer you can choose between our hand-made wooden rifle stock and the training handgun. Users only need one GAIM trigger, it is modular and can easily be moved between the weapon controllers. The trigger has adjustable pre travel before break.

Ballistics and animal anatomy

In the GAIM ballistics engine we use the data of a standard 308w cartridge for our rifle calculations. Weight 11,7 grams. Speed 800 m/s. The calculations for shotgun are based on US6 with 411m/s exit speed. All animals have correct anatomy and only hits in the lungs, heart, neck and brain take down the animal.

Sport shooting

GAIM offers a wide range of sport shooting practice. Our SimPro® Clay Pigeon allows the user to choose all aspects of shooting clays, such as speed, size, towers and shooting position. We also offer Skeet, Trap and 5-stand.

Software for the Training Handgun

For the Training Handgun we have the SimPro® Sport Shooting where you can choose steel and paper targets, shooting stances and distances. The IPSC and GAIM of Steel scenarios are a great way to test your skills and compete with friends.

Meta Quest 2 VR headset

GAIM is compatible with the Meta Quest 2 and Pro headsets. We do not sell Meta Quest.
